Appendix - WBS and Project Template Setup	26

Document InformationAuthorPhil IvamyQAVersion1Date Created15 September 2022Date15 September 2022

### **Overview**

Projects are essentially large jobs that are broken down into smaller jobs for better management and costing control. They are generally billed to a Contract, so how the Jobs are split should also support the contract for claims.

To make it efficient, we utilise **W**ork **B**reakdown **S**tructure (WBS) codes. At the quoting stage, when there is only one job, you label each line with a WBS code. On winning the project, Nimbus will create the Jobs and allocate the quote across them according to the WBS codes.

Project	Build a 3-bedroom house at 123 Anywhere Street	WBS code
Job #1	Planning and preparation	1
Job #2	Foundations	2
Job #3	Framing to close in	3
Job #4	Plumbing	4
	Electrical etc	etc
Retentions Job	Less Retentions	

Schematically, a project looks like this:

Often these jobs are consistent for many Projects, so you create a 'Project Template' incorporating the structure and WBS codes.

### The Process

### **Setup:** Planning & Preparation

You will reap the rewards of a well-structured quote if you take the time to plan it. While for some industries it is appropriate to 'make broad allowances', and only change this to detail for the quotes you win, structured industries are better served by having a detailed quote in the first instance, which can start from a 'Template' holding all the usual materials and activities, which you re-price and modify to the specific job at hand.

For training, we will use existing Quote and Project Templates so that you get the maximum benefit faster.

### STEP 1: Log a Job to hold the Quote

Projects usually begin with a request for a quote/tender. If a Prospect Job has not already been created, the first step will be to log a new Job to hold the quote.

#### **STEP 2: Prepare and Send Quote**

Prepare the quote using the 'Quoting' template. Enter the WBS Codes in preparation for quote spreading if the quote is accepted. Send the quote to the client and change the status to QS.

### STEP 3: Set up the Project Work Package from the Quote

On winning the quote, make a Project and have Nimbus spread each line in the quote to its appropriate Job, ready for work.

#### STEP 4: Carry out work and processing, as for any jobs

Once the individual Jobs are set up, the system is ready for people to work on the Jobs. As far as the system is concerned, these are no different to any other jobs.

#### **STEP 5: Management of the Project**

The main financial reward to your company from using Nimbus comes from knowledge. In this case, using knowledge to nip problems in the bud; using knowledge to recognise variations and find the key details to aide you in claiming these variations.

#### **STEP 6: Open a Variation**

The key action to increase Project Revenue is claiming Variations. Open a Variation Job, put some costs to it, and value it, ready for the progress claim.

#### **STEP 7: Generate a Progress Claim and Invoice**

#### **Generate a Payment Claim**

For Contracts, it is also normal practice to submit a Payment Claim to the client first. Use the Contract Claim Application to do this.

#### **Generate a Progress Invoice**

- When the Payment Claim has been authorised for payment a Contract Invoice can be generated. Retention amounts, if applicable, will be automatically withheld from the invoice.

#### **STEP 8: View Current Retentions**

Much money can be tied up in retentions. It is important to be able to see at a glance the Detail making up your retention balance, and which ones can be claimed now or soon.

#### **STEP 9: Claiming Retentions**

Once the Contract/Project has reached practical completion it is normal to claim back a percentage of the Retentions held, then the balance after a maintenance period.

### STEP 1: Log a Job to hold the Quote

Open this Job in exactly the same way as any Nimbus Job, which is defined in the Jobbing Training Notes.

ent Baily	Description	Build Freeze D	iryer	Project	Job No 1039

1. Create a new job in the usual manner.

- 2. Create the Job with
  - a. **Status** QR, Quote Request, as you need to do a Quote / Tender for it. Normal process.
  - b. **Invoice Queue** Contract, as it will be billed through the Contract Claims process.

### **Step 2:Prepare and Send the Quote**

This is a critical process, because it will:

- Provide an accurate costing and pricing process.
- Drive Variation information later on.
- Help you take a structured process to your calculations.

We will start from a "Template", so that you don't have to worry about what codes to use when building the quote.

To build the project/contract quote:

1. From the JobFlow menu, click on the To Quote menu item;

Jobs to Qu Filter : No		that have	e a Q status. The	quote needs to be prepared, completed, or follow	ved up.								
O Refres	h Report	Print •	Export 🔻	🖗 Clear Sort 🛛 🖗 Clear Filters 🏾 🕁 Save Repor	t Setting 🛛 🕁 Cl	ear Report Settings							
Branch	Client		▼ Job No	Description	Status	Supervisor	Days To Go	Style used	Invoice Type	Make Project	Spread Quote	Purch Order	
		#				æ							
	Cooper		1040	603 Grain Silo	QA	Brian		Quoting	Contract	newP			
	Johnson		1026	Siteworks	QS	Brian	-2792	Quoting	Quoting				
	Johnson		1010	Freeze Dryer Johnson EX	QS	Brian	-2776	Quoting	Quoting				

2. Note your Job Number and then click on the header link Quote Template List to open the **Quote Templates** report that lists the available templates.

er : No Filter						
Refresh Report	🚔 Print 🔻 📓 Export	▼	Clear Filters 🛛 🕞 Save Report Setting 🛛 🕞 Clear Report Settings			
Branch	Client	Job No	Job Description	Quote Style	Profit Centre	Supervisor
	Internal	QTEng	Engineer Quote Sample	Engineer	Div2	Adam
	Internal	QTFD6	Manufacture Freeze Dryer FD6	Quoting	Div2	Adam
	Internal	QTHrs	Hrs to Fit with Item Rates example	QuoteHr	Div2	Adam
	Internal	OTSW	Site Works Template	Quoting	Div2	Adam

3. Select the template that you wish to start from by clicking on its **Job No**. The following message appears:

#### 4. Click **OK**

The selected **Quote Template** now opens, showing the "standard" plans and materials.

You now have a quote on your job based on the template you selected.

The Build Freeze Dry example we have used (above) is a well laid out example of the steps you go through, and the materials you need, as you build a Freeze Dryer.

This example has main areas – Design, Chamber and Assembly. These are each in a **Schedule Set** with a total at the end of each Schedule.

The Budget and Billing grouping is Design (1), Chamber (2), then the Door, Cooler unit and Assembly are all together (3). Look at **the WBS Column** to see this and you will note that each section has a different number.

The Top Row shows the overall Total Sell Price, Total Cost to build, and the Gross Profit.

Changes can be made to this quote like any normal quote such as:

- Adjusting the quantities of items in the Schedules
- Adding Materials/Labour
- Adjusting Cost Prices of items
- Adjusting the margins in the Close Out work sheet.
- Adjusting the margins on individual items
- Adding a new schedule of work

Refer to the Quoting training document for more information on this.

- 1. Save the Quote
- 2. Print the Quote

# Step 3: Set up the Project Work Package from the Quote

When the quote is won we need to create a Project, and a set of Jobs each with their own budget, so that the work can be carried out and the job costs can be managed against budgets.

### Turn the Quote into a Project with Project Jobs

1. Set the Job Status to QA - Quote Accepted

From the **To Quote** item on the **JobFlow** menu, click on Description to edit this Job, and change the status.

- 2. Refresh the **To Quote** report.
- 3. The **Supervisor** column will now be highlighted.

lobs to Qu Filter : No		a Q status. The	quote needs to be prepared, completed, or follow	ved up.

Invoice Type	~	- Approx
Template	88)	3. After the WBS Jobs are made, you can 'Spread the Quote'.
		This will divide the Quote to these Jobs.
This WBS Process will create one Job to project for each Job in your chosen Temp		First enter the WBS column for every line in the quote. Quoting
project for each Job in your chosen remp	nate	Then Commit the Quote to lock it down.
		Committed
		Spread Quote

This form is used to

- Create a Project
- Create the Project Jobs
- Allocate the (budget) to the Project Jobs
- 4. On the Project Details Tab, complete as follows:
  - a. Click the **Project No** field to indicate that a new project needs to be made. It turns blue.

Note that the **Client, Description, Debtor** and **Invoice** Type are automatically filled in.

- b. Complete the following compulsory fields
  - Project Number (4 characters). Some clients use alpha, some a number. It can be set up to be an "AutoNumber' if required.
  - · Project Description
  - · Supervisor
- c. Use the lookup button next to the **Template** field to select the appropriate Project/Contract template. This is the template that will be used to make your Job set. In some cases you may have just one master template called "Template" to select from.

4	3 Lookup ·	- U_ContractTemplates - Goo	gle Chrome	- 0	×
	(i) localh	ost/NimbusNIMLP60/We	bEditor/LookupR	ecord.aspx	Q
1	Contract	Description	Debtorindex		
	Template	Template - WBS Jobs	Internal		
				_	

d. If retentions are to apply, enter the **Retention Rates** and Break levels.

2. Enter Retention rates	
First Percent 10	Up to: 20,000.00
Second Percent 5	Up to: 0.00
Third Percent 0	Apply

These Retention Rates are used by the Contract Invoicing Application to ensure that the correct values are retained on the contract. Retentions are held back from the Main Contractor by the Client to cover a maintenance period on the Contract/Project. The Retentions are then released back to the Main Contractor at the end of the maintenance period. Some contracts may not utilise retentions at all, whilst other contracts will have lower retentions withheld as the contract increases in value. This is common practice.

Cooper Details Project Detail	Contact Details	603 Grain Silo Job No 1040

Invoice Type	Jobbing Jobbing 🗸		
Template	Template 🐘		3. After the WBS Jobs are made, you can 'Spread the Quote'
	Template - WBS Jobs		This will divide the Quote to these Jobs.
	s will create one Job to this		First enter the WBS column for every line in the quote. Quoting
roject for each jo	in your chosen remplate		Then Commit the Quote to lock it down.
			Committed
			Spread Quote

d. Now click on the **Spread Quote** button and then **OK** to the following message.

Note: The procedure will run successfully if all of the setup has been completed correctly. If not, an error message will be displayed and you will need to make corrections and then re-run Spread Quote. Some common errors are:

- Not all of the Lines in the Quote have a WBS code Nimbus will only spread the quote if all lines can be allocated.
- The quote is not committed
- There is not a Job in the Job set for a WBS code

The Spread Quote procedure has:-

- Gone through every line of the quote for the Project and copied the details to the appropriate Job;
- Given each Job a Job Description of the WBS Code description;
- Deleted any Jobs that were created from the template, but don't have a budget transferred;
- Set the status of the original Quote Job to XT Template so that no postings can be made to it.

To view this detail:

1. From the **Projects** menu, click on the **Projects** item to see a list of all projects.

All active Jobs are displayed, with budgets, costs to date, costs to complete, and end-ofproject estimates on project margin compared to expected margins.

The budget cost has utilised the values entered in the original quote where the WBS code matches the number in the Job No field.

Links are available on many fields to detailed information on jobs, costing, orders and variances

This report is important in the managing of each Project.

4. Back on the project report click on the **Job Count** to see the Jobs in the Project.

Note that any unused Jobs will have been closed and deleted, and the status of the original Quote Job is XT indicating it is a Quote template, and no postings are to be made to it.

## **Step 4a: Purchasing for the Contract**

This is the same as for any job, as outlined in the Purchase Order documentation.

## Step 4b: Carry out work and processing, as for any jobs

The processes for recording what is used for a job (Time, Materials, Plant, etc.) is the same for a Project job as a standalone job. These are covered in the Jobbing and Job Management training documentation.

## **Step 5: Management of the Project**

It is important that at any time during the course of a Project you can see what it has cost so far, and what it is likely to cost, along with the estimated profit at the end.

1. From the **Projects** menu, click on the **Projects** item, and then click on the **Project** column to open the **Project Manager** report.

Project Manager : Summarises project, drills to project details. Used to enter costs to complete and predict results Filter : Project equals FDC

There is a lot of information in this report including all postings that have been recorded up to this point in time. You can compare actual costs against budget cost, actual hours against budget hours etc.

The report can also be used to forecast your final margin. You will know how many hours will be required to complete the Project and additional costs will be incurred. These can be entered into Nimbus, and be included in the **Project Manager** report to calculate an **Estimated Margin**.

#### 2. Update the Costs to Complete.

Note - not everybody does this even though it is useful project management information.

From the **Project Manager** report click on the **Job Description** to open the **Job** form.

· Click on the **Project Details** tab.

- 5. Experiment with other links on the **Project Manager** report
  - a. Click the **On Order** field to open items on order for this contract job.
  - b. Click on the **Job No** field for a full Job Enquiry for this contract job.
  - · Click Job No again to get a Detailed Job Transactions enquiry

### **Step 6: Open a Variation**

Variations to a Project/Contract are common. Often Variations have the best profit margin of all the jobs for a Project. In this example, the Variation will be quoted and billed as a separate line on the Project Claim.

Sometimes the variation value is agreed at a site meeting, and then the quote is made so it can be claimed with the Contract in the usual way.

To Open a Variation Job:-

1. Open the **Project Manager** report. Click the **Add Variation** header link.

- a. Fill in the **Description** of your Variation job. Select the **Profit Centre** and **Supervisor** which are compulsory fields. The **Status** JP should already be correct.
- b. Click the **Apply** button to accept the details.
- c. Click the **Quote** button to open quoting and enter the agreed variation amount as a quote. Commit the quote.

# **Step 7: Generate a Progress Claim and Invoice**

Your Company workflow will determine who calculates the percent to claim for each job of a Project

For the purposes of this training, we will have the Project Manager calculate the claim, and then the Office process it. The Office will also generate the Invoice when the payment amount is confirmed.

# **Step 7a: Generate a Payment Claim**

1. Open the **Project Manager** report for your Project.

O Refre	sh Report	🚔 Print 🔻 📓 Export 🔻	Clear :	Sort 🖗	Clear Filters	Save Report	Setting	Clear R	leport Settin	gs

The application now opens up with the choice of 3 "Use" options as highlighted above:-

- Use **Cost %**: where the percentages will be based on the percentage of the costs against Quote (budget).
- Use **Job%**: where the percentages will be percentages entered on the Job (as we did)
- Use **Returned Claim** where you can open up an existing claim in progress and change the percentages or \$ amounts according to the changes made by the customer or their project manager.

All of the jobs for the project are listed; check they are all there including any variation jobs.

Jobs need to have **Invoice Type** of Contract, and **Status** JP Progress Invoice to appear in the list. If any jobs are missing, open them by clicking on the description on the **Project Manager** report, and edit them as required.

- b. Select **Job%** or **Cost%** to use the appropriate percentage, and calculate the claim amount. You can modify the claim amount by changing any of the three claim columns; **%Complete, New Claim**, or **Total Claim**.
- c. Once you are happy with the claim, check the **Retentions**. These will have been calculated for you, but you can over-write the figures as appropriate.
- d. Click the **Save** button to make your Payment Claim.

This is NOT an Invoice. It is a claim only, to post to your Client or the Project Manager of the Project.

	Nimbus OPTIMUM PO Box 123 Nelson New Zealand
Automotive Electrical PO Box 567	Phone: +64 3 5123456 Fax: +64 3 5678901 Email: wayne@nimbus.co.nz
SunnySide	PAYMENT CLAIM
Nelson 7020	Claim Date: 30-Apr-2016
	Claim No.: 5

Contract No: RFT Contract Name: Freeze Tower Renovation

Job Number	Job Description	New % Complete	Quote	New Claim \$	Previous Claims	This Claim \$	Status
RFT-1	Design	50.00	45,020.00	22,510.00	45,020.00	-22,510.00	JP
RFT-2	Foundations	0.00	31,480.00	0.00	14,166.00	-14,166.00	JP
RFT-3	Flooring	0.00	293,375.00	0.00	0.00	0.00	JP

Net Total	\$22,510.00	\$ -36,676.00
Less Retentions	\$-2,125.50	\$ 1,833.80
Total To Pay		\$ -34,842.20

Once a **Payment Claim** has been generated and sent, it is normal for the Client or Project Manager to review it to see that it is fair and accurate. If necessary they may change percentages/amounts or variations accepted and return this to you as a **Payment Schedule**. It is from the information on the Payment Schedule that the actual **Project/Contract Invoice** is generated.

# Step 7b: Generate a Progress Invoice

Generating the Project/Contract Invoice uses the Contract Claims Application and is much the same as generating the Payment Claim, except this time it is for real, so you want the Invoice, GST and Debtors Accounts all to update.

- 1. From the **Project Manager** report, click on the **Contract Claim LS** header link to open the **Contract Claim** application.
- 2. As a claim has been generated it will open up as **"Use Returned Claim"**, with the claim values being those that were claimed in the Payment claim.

# **Step 8: Check Retentions**

Retentions : Lists outstanding retentions. Drills to detail.

1. From the **Projects** menu, click on the **Retentions** item to open the Retentions report.

Filter : No Filter						
C Refresh Report	🚔 Print 🔻 🖼 Export 🔻 🔞 Clear So	rt 🛛 🗑 Clear Filters 🛛 🕁 Save Report Setti	ng 🙀 Clear Report Settings			
Branch	Project	Job No	Description	Due At	Retentions %	Amount
	æ	6				
	FDC	FDC-Z	Retentions	28/03/2015	8.13	\$2,598.50
	RFT	RFT-Z	Retentions		6.43	\$4,487.35
	SPA	SPA-Z	Retentions	30/04/2015		\$2,841.34
	WKE	WKE-Z	Retentions	30/04/2015	10	\$38.50

- 2. This lists all Retention jobs that have retentions outstanding. You will see your Retention job in this list.
  - a. Click the **Description** field to open the **Job** form and enter/amend the **Due Date** i.e. when you can claim back the retentions from the client.
  - b. Click the **Job No** to open the **Job Enquiry Detail** report and see the history of this retention value to date.

# **Step 9: Claiming Retentions**

You should monitor you **Retentions Report** as part of you month end process to ensure that you claim retentions as soon as you are able to.

To claim retentions:-

×

1. From the Projects menu, click on the Retentions item to open the Retentions report.

tetentions : Lists Filter : No Filter	outstanding retentions. Drills to detail.

- f. Alternatively you could open the original project and set the original retention percentages and amounts to zero and do a new **Contract Claim** as above.
- g. Refresh the **Retentions report** to see the amount of retentions on the Project has reduced.

# **Appendix - WBS and Project Template Setup**

Understanding the setup of WBS codes and Project templates is much easier to comprehend once you have used it. The setup of these is designed to streamline the project process and make quoting for projects and the setup of won projects an automated process. This applies to projects/contracts that your business undertakes on a regular basis i.e. House Design A: Build, House Design B: Build, etc.

There are several things to consider when coming up with the structure for a project:

- What jobs are common to your Project? These should be structured in a way that considers the following:
  - a. Cost Management
  - b. Interdivisional work and Profit Management (jobs per division working on the contract)
  - c. Contract Claim management (Jobs per % Complete on the Invoice)
- A WBS Code to represent each job.
- Do you require further analysis for jobs? i.e. make 'Deliverables' for each grouping of jobs. For really big projects, you may want groupings of the deliverables, i.e. Deliverable Groups. See your Nimbus Consultant if you require this.
- You will need a Project Template (Project), and the Jobs for that Project Template. The Project jobs will require the appropriate Profit Centres, and WBS Codes. Each quote for a particular project will require a WBS code per line to match the Project Template Job's WBS codes.

Project	Job No	Job Description↑	WBS code	Status	Supervisor	Profit Centre	Invoice Queue
Template		Preparation and Management	1	ХТ	Brian	Const	Contract
Template		Foundations	2	ΧТ	Brian	Const	Contract
Template		Farming	3	ХТ	Brian	Const	Contract
Template		Roofing	4	ХТ	Brian	Roof	Contract
Template	0025	Retentions	Z	XC	Brian	Retain	Contract

### Sample Project Template Scheme:

### **Project WBS Creation**

WBS is an abbreviation for Work Breakdown Structure.

To make a WBS for your Project you need to:

- Make the WBS Codes
- Make a Job for each WBS Code, and enter the WBS Code on Project Tab.
- Enter a WBS Code on each line in your Quote

#### **Create WBS Codes**

WBS Codes are required for the 'Spread Quote' procedure to identify the correct Project/Contract Job to send each line item in the quote to. If your system does not have WBS Codes, or if the existing WBS Codes do not meet your current requirements, new WBS codes will need to be created.

If new WBS Codes are required, it pays to create these before you prepare the quote as then you can enter them as you prepare the quote.

To view and edit current WBS Codes:

- 1. From the **Setup** menu, click on the **Code Tables** menu item.
- 2. Enter 'WBS' in the filter field and then press Enter.
- 3. Click on **WBS Codes**. This action opens the **WBS Codes** report. All WBS Codes held in the database are listed. View as required. Click on one of the lines to edit that WBS Code.

To make a new WBS Code:

1. Open the **WBS Codes** report, as above.

WBSCode	Description	PickOrder 1	Detailed_Description	Discontinued
1	Design	1		0
2	Foundations	2		0
3	Flooring	3		0
4	Plumbing	4		0
5	Electrical	5		0
z	Retentions	99	Using Z so that it is the last Job in the List of Jobs.	0

2. Click on **Add New Item** located in the header of the WBS Codes report, as shown above to open the following form.

BSCode	Description
	Electrical
ckOrder	
tailed_Description	

3. Enter a character code in the WBSCode field. The WBS code can be up to 2 characters. This code is used when creating job numbers therefore it cannot be any longer than this.

- 4. Enter a description for this WBS code in the Description field, e.g. Design.
- Enter a number in the **Pick Order** field. The pick order determines the position of the code in any list,
   e.g. a pick order of '1' will put the code at the top of the list.
- e.g. a pick order of 1 will put the code at the top of the ti
- 6. Complete the Detailed Description field, as applicable.
- 7. Click the  $\square$  button to save the record and close the form.

#### **Create Project and Job Templates**

Your system may have templates already. These will have been designed to meet your existing requirements. Always check the database before proceeding.

If a new kind of project/contract arises, new templates will need to be made if the quote has been accepted. Creating templates is a two-step process:

- Create a new project/contract template, and
- Create the job templates and link them to the newly created project/contract template.

Note that in creating templates you are creating a structure for the future. Real projects/contracts are going to be linked to these templates and once linked, they will adopt the settings held in the templates. The template system therefore automates a lot of set-up work. Because many jobs are linked to one project, so too will many Job Templates be linked to one Project/Contract Template, as illustrated below.

#### **Create Project Template**

To create a new Project/Contract Template:

- 1. From the **Projects** menu, click on the Projects menu item. This action opens the **Project List** report and shows all the current projects.
- 2. Click on **New Project** located in the header links of the report. The **Project** form opens.

ject	D	escription					
tails Claims and In	voicing WBS	Setup Documents					
lient	443	Start Date	8	End Date	100		
upervisor	00	L			4		
	<b>48</b>						
otes							
				Price%		~	
				Stock Price		~	
				Stock Price		•	
					Cl	osed	
	upervisor	upervisor	ient Start Date	ient Start Date 같 upervisor	ient Start Date End Date	ient Start Date End Date	ient Start Date End Date

- 3. In the header:
  - a. Enter the Project/Contract code for the template in the Project field. Press **Tab**.
  - b. Enter a description for the template in the Description field. Press Tab.
- 4. On the **Project Details** tab:
  - a. Enter the 'Internal' Debtor Account in the Client field. Because this template is for your organisation only.
  - b. Enter a person responsible for this template in the Supervisor field. A lookup is available, if required.
  - c. Because a template is not an actual Project/Contract, leave the Start Date field blank. Press **Tab**.
  - d. Enter any notes about this template (if applicable) in the Notes field.

Project Ten	ip04	Descriptio	n New Kitcher	1 Template			
ject Details Cla	ims and Invoicing	WBS Setup	Documents				
Client			Start Date		End Date

Notes					Price% Stock Price		<b>~</b>
Notes							
Notes							
Notes							~
Notes							

5. On the **Claims and Invoicing** tab, note the **Invoice Queue** field. A template will always use the 'Template' invoice queue. Enter the 'Template' invoice queue in the **Invoice Queue** field.

Projects - Nimi	busNIMLP6	0 - New - Go	ogle Chrome						0	×
i localhost/N	limbusNI	MLP60/Web	Editor/View	Form.aspx?Fo	ormName	=Projects#				(
Project	Temp04		Description	New Kitche	n Template					
Project Details	Claims an	d Invoicing	WBS Setup	Documents						
Invoi	ce Queue	Template				Retention % Value up to Second Retention % Value up to Third Retention % Last Claim Number Max Retentions Stop F Contract Claim Measure and Y				
New	Сору		Documents			ок	Cancel	A	pply	

- 6. On the **WBS Setup** tab, note the **Template** field. For a template Project/Contract this field should remain blank. The field is only used by 'real' Project/Contracts for linking it to a template.
- 7. Click the **OK** button to save the record and close the form.

#### Create Project Job Templates

To create a new Project/Contract Job Template:

- 1. From the JobFlow menu, click on the Log Jobs menu item. A list of all Contacts is displayed.
- 2. Find the 'Internal' contact by entering 'Internal' into the Client filter field and then press **Enter**.
- 3. Click on NewJob held in the New Job column. This action opens the Job form.

ent Cash Sales	di d	escription				Project		Jol	b No <au< th=""><th>uto&gt;</th></au<>	uto>
b Details Job O	ffice Details	Project I	Details Asset	:/ SLA Contact De	tails

	Quote		ob Card							

#### 4. In the **header**:

- a. Note that Nimbus has completed the Client field for you. This is because you accessed the form from the **Contacts** web report so that Nimbus was able to pass the client name into the form.
- b. Enter the description of the WBS Codes that you are allocating to this Job in the Description field e.g. Planning.
- c. Using the Project field, link the Project/Contract Job template to the Project/Contract template. Use the lookup to select the Project/Contract template that this Project/Contract Job is to be linked to.

Contract	Description	DebtorIndex	Old
			0
1039	Freeze Dryer	Baily	0
FDC	Freeze Dryer Craik	Craik	0
RFT	Freeze Tower Renovation	AutoElec	0
SPA	Building site Preperation	ADCInt	0
Templ04	New Kitchen template	Internal	0
Template	Template	Internal	0
WKE	New Workshop	JarrettD	0

- 5. On the Job Details tab:
  - a. Enter the **status** that is to be adopted for the jobs that will be created using this template usually JP.
  - Enter the **invoice queue** that is to be adopted for the jobs that will be created using this template,
     e.g. Contract (Contract Invoice).
  - c. Complete the other fields as normal. Remember that all entries made will be adopted by the jobs that are created using this template so think carefully before completing these fields.
- 6. On the Project Details tab:
  - a. Link the Project/Contract Job template to a Deliverable **if required**. Use the lookup to make your selection.
  - b. Link the Project/Contract Job template to a WBS Code. Use the lookup to select the WBS Code that will be used to spread the quote to this Project/Contract Job.
- 7. Click the Apply button to save the new template details. A job number is allocated. As this job is a template job only, change the job number to something that means 'template' to you, e.g. ZZ100. A numbering system like this keeps all templates filed together. Click the Apply button to save changes.
- 8. If another Project/Contract Job template needs to be created, click the Copy button. Repeat the steps above until all Project/Contract Job templates have been created.

Once the above WBS codes, Project Template and Project Job Templates have been setup, these can then be utilized in the process of creating Projects, Quotes and Project Jobs as outlined in this Training document.

The key is to ensure the WBS codes that have been created are present in the Project quote and that this quote job (when won) is used to create the Project.
